

BPL is a very bad idea. It will cause more problems than it solves, particularly in its devastating effects it -will- have on MF and HF communication. Now, how will so called "HD Radio" on AM work if it's all covered in other digital hash from every computer in the neighborhood is radiating freely through the power lines? Let's stick with microwave, cable, DSL and satellite delivery of broadband services, and not add BPL to the mix of noise already plaguing the AM and shortwave spectra. Please, listen to the amateur radio community, and withdraw approval from BPL.

Sincerely,
Jason Brose KC7TWT
